

Nylon 66 | material information

Nylon 66

Product full identity:

Nylon 66 / Polyamide 66 (PA 66)

Nylon 66 has a higher mechanical strength, stiffness, heat and wear resistance than standard 6. It also has a better creep resistance, however, its impact strength and mechanical damping ability are lower.

Properties

- High strength and stiffness
- Easily machined
- Food contact approved
- Dimension stability and electrical properties
- High wear and creep resistance
- Wide temperature range (+95 to -30°C)

Applications

- Gears
- Bushes
- Washers
- Applications that require wear resistance

Forms

Solid Rod

Sheet
