

# Nylon 66 GS | material information

## Nylon 66 GS

---

**Product full identity:**  
**Nylon 66 GS**

Nylon 66 GS has a higher mechanical strength, stiffness, heat and wear resistance than standard Nylon 66. It also has a better creep resistance, however, its impact strength and mechanical damping ability are lower.

## Properties

---

- High strength and stiffness
- Higher wear and heat resistance
- Good creep resistance
- Easily machined
- Good Temperature Range (+80 to -20°C)

## Applications

---

- Gears
- Bushes
- Washers
- Applications that require wear resistance

## Forms

---

-  Solid Rod
